

# WAREHOUSE LABELS MADE EASY: We Design, Print and Install for You!

## NO WAREHOUSE LABEL PROJECT TOO BIG OR SMALL!

Planning and project managing the install of new warehouse racking and location labels can be mind-boggling.

There are so many aspects to factor in, from whether you need self-adhesive or magnetic fixings, to alpha or numeric systems to which type of barcoding is required - the list goes on!

We can take a load off your mind by being your trusted partner through the entire process from start to finish. With 100+ years combined experience in the label industry, you can rely on our specialist knowledge to ensure delivery of an effective labelling system for your warehouse.

With our in-house machinery, we have complete control over the quality and precision of every label we produce.

Our service includes advice and consultation in the planning stage, hire of equipment, and installation fulfilled by trained personnel.

Get in touch with us today to discuss your printing or installation requirements.

# A LABEL FOR EVERY OCCASION

Not sure what type of label you need? Here's a handy guide...

## 1. SINGLE LOCATION LABELS

Simple yet oh-so-effective. These labels pinpoint the exact spot where a product or pallet is stored. They can incorporate location code, directional arrows, barcode, and check digits.

## 2. DOUBLE LOCATION LABELS

With double the info, the number of labels required is reduced for manufacture and installation. These labels are applied to a first beam level or beams higher to provide location information for above and below the beam.

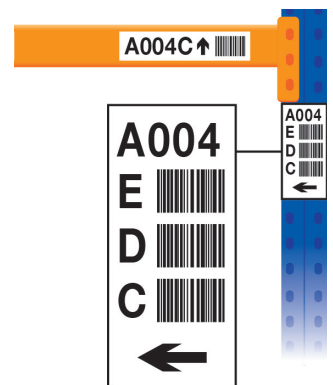

## 3. MULTI-LEVEL LABELS

Also known as split beam or summary labels, these larger labels are usually applied to first beams and allows users to scan upper level locations from the ground.

## 4. UPRIGHT LABELS

A vertical version of summary/multi-level/step beam label that allow users to scan upper level locations from the ground. These labels are adhered to styrene as, due to being vertical and affixed to racking uprights (which have holes in them) a regular label wouldn't stick properly and would get holes poked through it.

## LABEL FIXINGS

**Self-Adhesive** Self-adhesive labels work on many surfaces, from shelves to bins. Must be applied to a flat, clean and sealed surface. Beams must be dust free before labels are applied.

**Magnetic** Pop them onto metal surfaces like racks or shelves, and they'll stay put while still being easily repositioned.

**Materials** We Can Print On - Vinyls, Polyesters, Block-out.
